The Sterling USA safe door has an overall thickness of 6 ¼" and is constructed with a 2 ½" defense barrier of outer and inner steel plates creating a single composite material. This defense barrier, SUPER SECURA, houses a proprietary amalgamation of high density nuggets and steel fibers to withstand concentrated attacks with the most sophisticated equipment used by burglars today. The Sterling USA TL 30 also offers a massive solid steel hard plate covering the entire door. Contemporary hinges with massive hinge blocks and self lubricating ball bearings insure a lifetime of use. The hinges are mounted so that the door can be easily removed to reduce the weight for many services such as delivering the unit when using elevators with low capacities.

LOCKS

Sterling USA safes are equipped with a UL listed S&G group II key changeable combination lock. The lock is protected by a massive drill shattering hard plate and a punch resistant dial spindle is standard equipment on all Sterling USA safes.

BOLTWORK

The Sterling USA's standard locking mechanism is equipped with 6 to 10 massive 1 ½" diameter chrome plated steel locking bolts. Each bolt seats deep into the bodies protected bolt cup. The entire bolt work locking mechanism is also protected by a spring operated bolt detent system. The Sterling USA is also equipped with a three way active bolt work mechanism engaging the bolts horizontally and vertically into the body of the safe.

BODY

The Sterling USA formed body has a total protective thickness of approximately 3 ¾" enclosing a high density fire resistant composite material, SUPER SECURA, replete with nuggets and steel fibers to resist the most sophisticated attacks.

AUXILIARY LOCK

All Sterling USA TL30 safes (except the STR-K2) are equipped with a high security triple locking system. The auxiliary lock can function independently for day control or work together for dual protection of your valuables. Unlike most safes the Sterling USA TL30 optional lock offers an additional spring loaded relock device protecting the lock further. Optional locks can be found in the following choice of configurations:

- Combination Lock along with Electronic Lock
- Combination Lock along with High Security Key Lock

STERLING USA FINISH

An attractive high quality textured finish is standard on all Sterling USA safes available in Desert Sage, Grey, and Charcoal Grey. A wide variety of custom colors are available.
